### PAGER content is automatically generated, and only considers losses due to structural damage. Limitations of input data, shaking estimates, and loss models may add uncertainty.

#### population per 1 sq. km from Landscan **Structures**

Overall, the population in this region resides in structures that are highly resistant to earthquake shaking, though some vulnerable structures exist. The predominant vulnerable building types are unreinforced brick masonry and reinforced masonry construction.

# **Historical Earthquakes**

| Date       | Dist. | Mag. | Max      | Shaking |
|------------|-------|------|----------|---------|

Recent earthquakes in this area have caused secondary hazards such as landslides and liquefaction that might have contributed to losses.
